Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

## ALIGNMENTS

RESULT 1
RWHU1B
cell surface glycoprotein CD11b precursor [validated] - human
N;Alternate names: complement receptor type 3 alpha chain; leukocyte adhesion protein Mac
eukocyte integrin alpha chain; neutrophil adherence receptor alpham chain
C;Species: Homo sapiens (man)
C;Date: 31-Dec-1992 #sequence revision 31-Dec-1992 #text change 09-Jul-2004
C;Accession: A31108; A28915; A41600; A30892; A32218; A46526; A26091; I52567
R;Corbi, A.L.; Kishimoto, T.K.; Miller, L.J.; Springer, T.A.
J. Biol. Chem. 263, 12403-12411, 1988
A; Title: The human leukocyte adhesion glycoprotein Mac-1 (complement receptor type 3, CD1
m.
A;Reference number: A31108; MUID:88315033; PMID:2457584
A;Accession: A31108
A; Molecule type: mRNA
A;Residues: 1-1153 <cor></cor>
A; Cross-references: UNIPROT: P11215; GB:J03925; NID:g187284; PIDN: AAA59544.1; PID:g307148
A; Note: part of this sequence was confirmed by protein sequencing
R; Arnaout, M.A.; Gupta, S.K.; Pierce, M.W.; Tenen, D.G.
J. Cell Biol. 106, 2153-2158, 1988
A; Title: Amino acid sequence of the alpha subunit of human leukocyte adhesion receptor Mc
A; Reference number: A28915; MUID: 88257215; PMID: 2454931
A:Accession: A28915

Proc. Natl. Acad. Sci. Us.A. 95.4870-4875(1998)

T. FUNCTION: Integrin alpha-W/beta-2 is implicated in various as well as in mediating the uptake of complement-coated particles.

It is identical with CR-3, the receptor for the iG3b fragment of the third complement component. It probably recognizes the R-G-D C peptide in C3b. Integrin alpha-W/beta-2 is also a receptor for fibrinogen gamma chain.

C -1- SUBJUNT: Heterodimer of an alpha and a beta subunit. Alpha-M
                                                                                                                                                                                                                                                                                                        MEDLINE-87076671; PubMed=3539202; Pierre M.W., Remold-O'Donnell E., Todd R.F.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           -1- DOMAIN: The integrin I-domain (insert) is a VWFA domain. Integrins with I-domains do not undergo protease cleavage.
-1- SIMILARITY: Belongs to the integrin alpha chain family.
-1- SIMILARITY: Contains 7 FG-GAP repeats.
-1- SIMILARITY: Contains 1 VWFA domain.

              SEQUENCE FROM N.A.

Fathallah D.M. Sr., Zerria K. Jr.;

Submitted (MAY-2000) to the EMBL/GenBank/DDBJ databases.

-1- SUBCELLULAR LOCATION: Type I membrane protein (By similarity).

-1- SIMILARITY: Belongs to the integrin alpha chain family.

HSSP: P11215; 1BHQ.

GO, GO:0001160; P:cell-marrix adhesion: IEA.

GO, GO:0007229; P:integrin-mediated signaling pathway; IEA.

Schook L.B., Rutherford M.S.;

Let J.-K., Schook L.B., Rutherford M.S.;

Submitted (NOV-1995) to the EMBL/GenBank/DDBJ databases.

-!- SUBCELLUIARI LOCATION: Type I membrane protein (By similarity).

-!- SIMILARITY: Belongs to the integrin alpha chain family.

EMBL; U40072; AAB16869.1; -- let integrin alpha chain family.

U. Immunol. 138:12381-2383 (1987).
C - FUNCTION: Integrin alpha-X/beta-2 is a receptor for fibrinogen. It recognizes the sequence G-PR in fibrinogen. It mediates cell-cell interaction during inflammatory responses. It is especially improvated in monocyte adhesion and chemotaxis.
C --- SUBCNIT: Heterodimer of an alpha and a beta subunit. Alpha-X associates with beta-2.
C --- SUBCELMUAR LOCATION: Type I membrane protein.
C --- TISSUE SPECIFICITY: Predominantly expressed in monocytes and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              granulocytes.

DOWAIN: The integrin I-domain (insert) is a VWFA domain. Integrins with I-domains do not undergo protease cleavage.

SIMILARITY: Belongs to the integrin alpha chain family.

SIMILARITY: Contains 7 FG-GAP repeats.

SIMILARITY: Contains 1 VWFA domain.
                                                                                                                                                                                                                                                                                                           [2]

"Isolation of genes selectively expressed by dendritic cells.";
Submitted (DEC-1999) to the EMBL/GenBank/DDBJ databases.
I submitted (DEC-1999) to the EMBL/GenBank/DDBJ databases.
Interaction alpha ar/beta-2 is a receptor for fibrinogen. It recognizes the sequence G-P-R in fibrinogen. It mediates cell-cell interaction during inflammatory responses. It is especially important in monocyte adhesion and chemotaxis (By similarity).

-!- SUBUNIT: Heterodimer of an alpha and a beta subunit. Alpha-X associates with beta-2 (By similarity).

-!- SUBCELLULAR LOCATION: Type I membrane protein (By similarity).

-!- DOMAIN: The integrin 1-domain (insert) is a VWFA domain. Integrins with 1-domains do not undergo protease cleavage.

-!- SIMILARITY: Contains 1 VWFA domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This SWISS-PROT entry is copyright. AT "Cloning of rat alpha D, a novel beta 2 integrin.";

Submitted (AUG-1997) to the EMBL/GenBank/DDBJ databases.

L. FUNCTION: Integrin alpha-D/beta-2 is a receptor for ICAM3 and

VCAM1. May play a role in the atherosclerotic process such as

Clearing lipoproteins from plaques and in phagocytosis of blood-

borne pathogons, particulate matter, and senescent erythrocytes

C clearing lipoproteins from plaques and in phagocytosis of blood-

borne pathogons, particulate matter, and senescent erythrocytes

C from the blood (By similarity).

C -1- SUBGNAT: Heterodimer of an alpha and a beta subunit. Alpha-D

associates with beta-2 (By similarity).

C -1- SUBGNATN: Type I membrane protein (By similarity).

C -1- DOWAIN: The integrin I-domain (insert) is a VWFA domain. Integrins

With I-domains do not undergo protease cleavage.

-1- SIMILARITY: Belongs to the integrin alpha chain family.
                                                                                                                                                                                                                                                                                954 HOYOVSNIGORSLPISLVFLVPVRLNOTVIWDRPOVTFSENLSSTCHTKERLPSHSDFLA 1013

Gene 325:97-101 (2004).

Gene 325:97-101 (2004).

Gene 325:97-101 (2004).

I. FUNCTION: Integrin alpha-L/beta-2 is a receptor for ICAMI, ICAMZ, ICAMI and ICAMI and ICAMI are involved in a variety of immune phenomena including leukocyte-endothelial cell interaction, cytotoxic T-cell mediated killing, and antibody dependent killing by granulocytes and monocytes (By similarity).

-!- SUBUNIT: Heterodimer of an alpha and a beta subunit. Alpha-L associates with beta-2 (By similarity).

-!- SUBCELLUIAR LOCATION: Type I membrane protein (By similarity).

-!- SUBCELLUIAR LOCATION: Type I membrane protein (By similarity).

-!- DOMAIN: The integrin I-domain (insert) is a VWFA domain. Integrins with I-domains do not undergo protease cleavage.

-!- SIMILARITY: Contains 7 FG-GAP repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This SWISS-PROT entry is copyright. LI FUNCTION: Integrin alpha-L/beta-2 is a receptor for ICAM1, ICAM2, ICAM3 and ICAM4. It is involved in a variety of immune phenomena including leukocyte-endothelial cell interaction, cytotoxic T-cell mediated killing, and antibody dependent killing by granulocytes

-!- TISSUE SPECIFICITY: Leukocytes.
-!- DOMAIN: The integrin 1-domain (insert) is a VWFA domain. Integrins with 1-domains do not undergo protease cleavage.
-!- SIMILARITY: Belongs to the integrin alpha chain family.
-!- SIMILARITY: Contains 7 FG-GAP repeats.
-!- SIMILARITY: Contains 1 VWFA domain.
-!- DATABASE: NAME=PROW; NOTE=CD guide CD11a entry;

SUBUNIT: Heterodimer of an alpha and a beta subunit. Alpha-L
SUBUNIT: Heterodimer of an alpha and a beta subunit. Alpha-L
SUBCELLULAR LOCATION: Type I membrane protein.
TISSUE SPECIFICITY: Leukocytes.
DOMAIN: The integrin I-domain (insert) is a VWFA domain. Integrins with I-domains do not undergo protease cleavage.
SIMILARITY: Contains 7 FG-3Ap repeats.
SIMILARITY: Contains 7 FG-3Ap repeats.
SIMILARITY: Contains 1 VWFA domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                05-JUL-2004 (Rel. 44, Last annotation update)

Screening assay for modulators of integrin binding - using immobilised or labelled alpha-d polypeptide, useful for, e.g. treating type-I diabetes.

Example 5; Fig 1A-D; 106pp; English.

This sequence represents a human beta-integrin CD11b subunit which is used to describe a method for identifying compounds that modulate the interaction of the beta-integrin alpha-d subunit with a binding partner of alpha-d which involves contacting an alpha-d polypeptide with an alpha-d binding partner, one of which is immobilised and the other of which is labelled, in the presence of a test compound, and determining if the compound affects binding between the alpha-d polypeptide and alpha-d binding partner, where the alpha-d polypeptide is alpha-d or its fragment comparising the cytoplasmic, transmembrane or extracellular domain of alpha-d. Compounds that modulate alpha-d binding could be used to treat

Integrins are a class of membrane-associated molecules that participate in cellular adhesion. Integrins are made up of an alpha subunit and a beta subunit. One class of human integrins are restricted to expression in white blood cells and have a common beta2 subunit: the leukcyte have an important role in immune and inflammatory responses. The present protein sequence is the human integrin alpha subunit CD11b. This sequence was used in an alignment to identify a novel beta2 integrin alpha approximately 60% identity to the protein sequence of alpha_d. The approximately 60% identity to the protein sequence of alpha_d. The Alpha_d gene and protein may be useful in therapy for diseases linked to aberrant alpha d function e.g. Type I diabetes, atherosclerosis, multiple sclerosis, asthma, psoriasis, lung inflammation, acute respiratory distress syndrome, rheumatold arthritis and leukocyte adhesion deficiency (LAD). In addition, anti-alpha_d monoclonal antibodies may be used in the

This invention relates to a modified integrin-I or integrin I-like domai polypeptide comprising at least one disulfide bond so that the domain is stabilised in a desired conformation. The polypeptide of the invention may have antiinflammatory or imunosuppressive activities. The polypeptides of the invention have an open conformation and are useful a immunogens to produce antibodies that selectively bind to integrin I-domain, and for identifying a modulator of integrin activity, or of interaction of an integrin and a cognate ligand. The polypeptide of the invention, or antibodies (preferably anti-LFA-1 antibody) is useful for treating or preventing an integrin mediated disorder which is an inflammatory or autoimmune disorder in a subject and for inhibiting the binding of an integrin to a cognate ligand such as Crohn's disease,

Sjorgen's syndrome, rheumatoid arthritis, dermaitis. A therapeutic, composition comprising the peptide of the invention is useful for treating an integrin mediated disorder in a subject. The polypeptides and/or active or antiqenic fragments are useful as reagents for diagnosis of integrin-mediated disorders. The present sequence represents the human integrin-1 alpha-M protein subunit used to generate the mutant polypeptides of the invention.
                                                                                                                                                                                                                                                                     GSLYQCDYSTGSCEPIRLQVPVBAVNMSLGLSLAATTSPPQLLACGPTVHQTCSENTYVK 120

1140 TLLPGQGAFVRSQTETKVEPFEVPNPLPLIVGSSVGGLLLLALITAALYKLGFFKRQYKD 1140 The invention relates to promoting locomotor recovery, inhibiting locomotor damage, limiting locomotor impairment, or limiting autonomic and sensory dysfunction following spinal cord injury by administering an anti-alpha d (Beta2 integrin alpha2 subunit) monoclonal antibody to a spinal cord injury victim. The method also involves the use of a ligand selected from ICAM-R or VCAM-1 (intracellular cell adhesion molecule, vascular cell adhesion molecule). The method is useful for promoting locomotor recovery, inhibiting locomotor damage, limiting locomotor impairment, or limiting autonomic and sensory dysfunction following leukocyte adhesion deficiency; inflammatory response; diabetes; multiple sclerosis; arthritis; graft atherosclerosis; neuroprotective; inflammatory bowel disease; Crohn's disease; ulcerative colitis; immune complex alveolitis; leukaemia; ICAM-R; VCAM-I; anti-inflammatory; intracellular cell adhesion molecule; vascular cell adhesion molecule; locomotor recovery; locomotor damage; locomotor impairment; an anti-alpha-d monoclonal antibodies for promoting locomotor y, inhibiting locomotor damage, limiting locomotor impairment, or ig autonomic and sensory dysfunction following spinal cord injury. spinal cord injury. In particular, the spinal cord injury comprises compression of the spinal cord. The antibodies are also useful for reducing inflammation at the site of a central nervous system injury. The specification also details the identification of Beta2 integrin alphab can implicated in diseases such as LAD (leukocyte adhesion deficiency, inflammatory response, diabetes, multiple sclerosis, arthritis, graft atherosclerosis, inflammatory bowel disease, Crohn's disease, ulcerative colitis, immune complex alveolitis and leukaemia. The present sequence is a Beta2 integrin alphab protein sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention comprises structurally biased variant integrin inserted (I) domain proteins, wherein the alterations to the protein occur in at least two noncontinuous regions. Specifically the the variant integrin I domain proteins are structurally biased to exist in the open conformation, thereby altering the binding ability of the protein. The invention also comprises nucleic acids encoding the variant integrin I domain proteins.
                                                                                            960
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Mac-1; integrin alpha subunit; variant integrin inserted domain protein; open conformation; integrin related inflammatory disorder; integrin related immunological desorder; rheumatoid arthritis; ischaemia; reperfusion; hypovolemic shock; infarction; cerebral shock; viral infection; cancer; gene therapy; vaccine;

The integrin I domain proteins and nucleic acids are useful for treating, preventing or suppressing integrin related inflammatory and immunological disorders (e.g. theumatorid arthritus). The variant integrin I domain proteins and nucleic acids can also be used for treating: ischaemial reperfusion (e.g. hypovolemic shock); infarction; cerebral shock; viral infection; and cancer. The variant integrin I domain nucleic acids and proteins may be used in gene therapy, as vaccines and to screen for bloactive agents. The present amino acid sequence represents the Mac-1 alpha subunit of integrin
                                                                                                                                                                                                                                                              9
                                                                                                                                                                                                                                                                                          9

1020 Binding domain; immunoglobulin; fusion protein; cytostatic; antiarthritic; immunosuppressive; antidiabetic; antithyroid; neuroprotective; hinge region; immunoglobulin heavy chain; CH2 constant region; fall constant region; IgG1; antibody dependent cell-mediated cytotoxicity; ADCC; complement fixation; antibody dependent condition; B-call disorder; melannoma; carcinoma; sarcoma; rheumatoid arthritis; myasthenia gravis; Grave's disease; type I diabetes mellitus; multiple sclerosis; autoimmune disease. 900 The invention relates to a binding domain-immunoglobulin fusion protein comprising a binding domain polypeptide that is fused to an immunoglobulin hinge region polypeptide, an immunoglobulin heavy chain CH2 constant region polypeptide that is fused to the hinge region polypeptide, and an immunoglobulin heavy chain CH3 constant region polypeptide that is fused to the CH2 constant region polypeptide. The New binding domain-immunoglobulin fusion protein, useful for treating a subject having or suspected of having a malignant condition or a B-cell disorder, e.g. melanoma, Grave's disease or autoimmune disease. ```
hinge region polypeptide, a mutated human 1gG1 immunoglobulin hinge region polypeptide, a mutated human 1gG1 immunoglobulin hinge region polypeptide, derived from (a) having 3 or more cysteine residues; where the mutated human 1gG1 immunoglobulin hinge region polypeptide contains to contains to contains to contains to contains a cysteine residues, where the first cysteine is not mutated; a mutated human 1gG1 immunoglobulin hinge region polypeptide, derived from (a) having 3 or more cysteine residues; where the mutated human 1gG1 immunoglobulin hinge region polypeptide, derived from (a) having 3 or more cysteine residues; where the mutated human 1gG1 immunoglobulin hinge region polypeptide contains no cysteine residues. The binding domain-immunoglobulin hinge region polypeptide contains no cysteine residues. The binding domain-immunoglobulin hinge region polypeptide contains no cysteine residues a mutated human 1gG1 immunoglobulin hinge region polypeptide contains no cysteine residues a mutated human 1gG1 immunoglobulin hinge region polypeptide contains on cysteine residues are an isolated polymulectide encoding the ninding domain-immunoglobulin fusion protein, a recombinant expression antigen. Also included are an isolated polymulectide encoding the binding domain-immunoglobulin fusion protein, a recombinant expression construct, producing the binding domain-immunoglobulin fusion construct, producing the binding domain-immunoglobulin fusion construct, producing the binding domain-immunoglobulin fusion construct, and treating a subject to subject having or suspected of having a malignant condition or a B-cell fusion protein or polymuclectide and a carrier, and treating a subject having or suspected of having a malignant condition or a B-cell disorder, e.g. mallanged main-immunoglobulin fusion protein is useful formed and subject having or suspected of having a malignant condition or a B-cell consumed at a for this patent formed protein sequence is a binding domain-immunoglobulin himpulation fusion protein equenc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      420
